

Application Note: R300 and X320 V4 Livestock Weighing

For some time now the majority of R320 and X320 firmwares have included our advanced livestock weighing functionality however a few special cases remained where customers were still using the older basic livestock weighing functionality. With the move to V4 hardware, the basic livestock weighing will no longer exist.

If the following settings are used in our advanced livestock weighing firmware, similar performance to the basic firmware will result:

- DELAY: 1
- SAMPLE: 5
- TOL: 0
- RETRIG: 0
- TARGET: Same as zero band

This applies to K35x, K376 and a number specials containing livestock functionality.
